for delivery of a water-soluble substance e.g. immunomimic peptides. (1) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from gastrin G-17 (ADH89206 to ADH89213 and ADH89223), gastrin G-34 (ADH89217-ADH892224), gonadotropin releasing hormone (GnRH) peptide (ADH89220 and ADH892224), and human chorionic gonadotropin (hCG) peptide (ADH892210 and ADH89222. (1) comprising vaccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one: hormone cognate receptors, where the vaccine comprises at least one: treating gastrointestinal malignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GnRH or hCG immunomimic peptide is useful as contraceptive and for treating cancers in male and female
                                                                                                                                                                                                                                                                                                                                                                                                     present invention relates to injectable liposomal compositions (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                             substance e.g. vaccine for preventing pregnancy, comprises several liposomal vesicles comprising a high weight ratio of lipid to encapsulated water-soluble substance.
                                                                                                                                                                                    Injectable liposomal composition for delivery of a water-soluble
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a creminal epitope of the gastrin hormone; (c) incubating the sample in the presence of an N-terminal sequence gastrin peptide under conditions for binding of the gastrin hormone in the sample to the antibody to brownen; (d) washing the immobilized complex to remove unbound antibody and N-terminal sequence gastrin hormone in the sample to the gastrin hormone complex to remove unbound antibody and N-terminal sequence gastrin peptide, and incubating the complex with a detectable marker-conjugated antibody that selectively binds an N-terminal epitope of gastrin hormone to form an immobilized detectable marker-conjugated antibody complex, (e) washing the immobilized detectable marker-conjugated antibody complex, and incubating with a development reagent; and (f) measuring the developed reagent to determine the total amount of (free) gastrin hormone in the bological fluid sample. The C-terminal selective antibody and/or the N-terminal selective antibody and the N-terminal selective antibody signation extended G17 (G17-G1y) and the C-terminal selective antibody bind G17. The method is useful for detecting and/or quantifying free or total amount of gastric hormone peptides including antibody-bound, in a biological fluid. The present sequence represents the amino acid sequence of G17-G1y, and in the present sequence represents the amino acid sequence component of little incomplete processed form of gastrin found as a minor component of little
               Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vaccine; development; antibody production; immunogenicity; gastrin;

                                                                                                                                                                                                         The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a second label, detecting cells staining with each label and selecting cells binding both labels. The invention also provides a method for detection of early 8 cell populations in vaccine development. The invention is useful for the preparation of an antibody. The present sequence is a gastrin peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                             Affinity-binding assay for selecting antigen specific immune cells, by contacting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.

The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a C-terminal epitope of the gastrin hormone; (c) incubating the sample in the patient of an N-terminal sequence gastrin peptide under conditions for binding of the gastrin hormone in the sample to the antibody to bormone; (d) washing the immobilized complex to remove unbound antibody complex of the mathody bound to the gastrin hormone in the sample to the gastrin complex of the antibody that selectively binds an N-terminal sequence gastrin peptide, and incubating the complex with a detectable marker-conjugated antibody that selectively binds an N-terminal epitope of gastrin peptide, and incubating with a detectable marker-conjugated antibody complex, and incubating with a detectable marker-conjugated antibody complex, and incubating with a detectable marker-conjugated antibody complex, and incubating with a categoral and (free) gastrin hormone in the biological fluid the total amount of (free) gastrin hormone in the biological fluid cantibody is a monoclonal antibody. The gastrin hormone is gastrin-17 (G17) or glycine extended G17 (G17-G1y) and the C-terminal selective antibody bind G17. The method is cusful for detecting and/or quantifying free or total amount of gastric hormone peptides including antibody-bound, in a biological fluid. The present sequence represents the amino acid sequence of gastrin 34 (G34), because the predominant form of big gastrins in human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
              Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a creminal epitope of the gastrin hormone; (c) incubating the sample in the presence of an N-terminal sequence gastrin peptide under conditions for binding of the gastrin hormone in the sample to the antibody to produce an immobilized complex to remove unbound antibody conformed; (d) washing the immobilized complex to remove unbound antibody and N-terminal sequence gastrin peptide, and incubating the complex with a detectable marker conjugated antibody that selectively binds an N-terminal epitope of gastrin hormone to form an immobilized detectable marker-conjugated antibody complex, (e) washing the immobilized detectable conformed antibody complex, and incubating with a detectable marker-conjugated antibody complex, (e) washing the immobilized complex of detectable marker-conjugated antibody complex, and incubating with a creatent and (free) gastrin hormone in the biological fluid sample. The C-terminal selective antibody and/or the N-terminal selective antibody and the N-terminal selective antibody bind G17. The method is antibody and the N-terminal selective antibody bind G17. The method is useful for detecting and/or quantifying free or total amount of gastric hormone peptides including antibody-bound, in a biological fluid. The gastrin 34 (G14-G1y).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                   Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                         stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune response to the coupled peptide or protein. The stimulator consistes of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse His phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component. The present sequence is an example of a gastrin hapten which can be bound to the immune stimulator to form a vaccine for treating peptic ulcer disease or gastrin-stimulated tumours.                                                                                                                                                                                                                                                                                                                                                                                ద
```

The present invention relates to methods for the treatment of colon

```
The invention relates to a pharmaceutical composition comprising a keratinocyte growth factor (KGF) agonist and a gastrin compound that provides beneficial effects relative to each compound alone, and optionally a carrier, excipient, or vehicle. The composition provides custained beneficial effects, and is in a form that provides normal blood glucose levels in a subject that persist for a prolonged period of time after administration. The composition further comprises amounts of a KGF agonist and a gastrin compound in a form for chronic or acute therapy of a subject in need, where the amounts are suboptimal relative to the amount of each compound administered alone for treatment of disbetes. The beneficial effects are reduced or absent islet inflammation, decreased the disease or condition, and/or are substained beneficial effects that the advanced or absent for the amount of each compound administered alone for treatment of disbetes. The beneficial effects and for a subject in addor are sustained beneficial effects that the persist for a prolonged period of time after termination of treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
cancer. The method involves inhibiting gastrin expression in colon cancer cells using antisense construct. The present sequence is a human amidated gastrin peptide. Gastrin is a peptide hormone that plays a role in the initiation of colon tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New pharmaceutical composition comprising a keratinocyte growth factor (KGF) agonist and a gastrin compound, useful in treating or preventing diabetes, hypertension, heart failure and obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KGF; FGF; keratinocyte growth factor; gastrin-17; antilipaemic; antidiabetic; vasotropic; cerebroprotective; cardiant; antiarrhythmic; antibacterial; immunosuppressive; antiinflammatory; gastrointestinal; antiulcer; hypotensive; nootropic; neuroprotective; anorectic; dermatological; endocrine; respiratory; hepatotropic; gene therapy; cell therapy; fibroblast growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

development of compounds with a nontropic, neuroprotective, antiparkinsonian, neurolegic, antipyretic, antidepressant, hypotensive, antiparkinsonian, neurolegic, antipyretic, antidepressant, hypotensive, antiparkinsonian, neurolegic, antipyretic, antidepressant, hypotensive, eating-disorders-Gen, anticorvulsant, anticonvulsant, antialcoholic, antialcer, cytostatic, antiinfammatory, antipsoriatic, antirheumatic, antialcer, cytostatic, antiantareriosclerotic activity acting as glutamingl cyclase inhibitors.

Colttaminal glutamate residues into pyroglutamic acid with liberation of Neterminal glutamate residues into pyroglutamic acid with liberation of versidues into pyroglutamic acid with liberation of water, the glutaminal cyclase inhibitors are useful in the treatment of various neuronal diseases. The composition containing a QC inhibitor is useful for the disease. The composition containing a QC inhibitor is useful for the disease. The composition of alsease, Down syndrome, parkinson's disease, Chorea Huntington, pathogenic psychotic conditions, schizophrenia, impaired food intake, sleep-wakefulness, syndrome, schizophrenia, impaired food intake, sleep-wakefulness, impaired homeostatic requiation of energy metabolism, impaired such as a function, impaired homeostatic requiation of energy metabolism, impaired such as a conditions, schizophrenia, impaired food intake, sleep-wakefulness, hypertension, fever, sleep dysregulation, anorexia, anxiety related disorders (including depression, seizures including epilepsy, drug cognitive dysfunction and demential. The compositions may also be useful for the treatment of ulcer, gastric cancer, neoplasia, inflammatory host responses, cancer, melanoma, malignant metastasis, psoriasis, rheumacoid arthritis, atherosclerosis and leukocyte adhesion and migration processes in the endothalium. The present sequence is that of a peptide which is related to the treatment method of the invention. Gastrin 17, glutaminyl cyclase; nootropic; neuroprotective; anticonvulsant; antiulcer; cytostatic; neuroleptic; antiinfertility; antipsoriatic; antirheumatic; antiarthritic; antiarteriosclerotic; human. Use of glutaminyl cyclase inhibitor for the treatment of e.g. Alzheimer's disease, Down syndrome, pathogenic psychotic conditions, schizophrenia This invention relates to a novel treatment of Alzheimer's disease, Down's syndrome or Huntington's disease which involves administering a glutaminyl cyclase (QC) inhibitor. The invention may be useful for the Gaps .. 97.1%; Score 100; DB 8; Length 17; 94.1%; Pred. ```
The invention relates to a novel pharmaceutical composition comprising a gastrin compound having an extended activity, upon administration to a subject, in comparison with native gastrin. The compounds of the invention may be useful for treating a subject having diabetes. This involves measuring a physiological indicator of islet neogenesis and fasting blood glucose (FBG). The method further involves decreasing insulin dependency. Furthermore, the compounds may be useful for maintaining an increase in gastrin serum level for an extended period of time. The current sequence is that of the human gastrin-17 mutant peptide of the invention which may act as a stimulator of the gastrin or CCK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pharmaceutical composition for treating subject with diabetes, has gastrin compound having extended activity upon administration to subject in comparison with native gastrin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antidiabetic; gastrin receptor; cholecystokinin receptor; gastrin receptor modulator; CCK receptor modulator; gastrin; diabetes; fasting blood glucose; insulin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      intentine. The present invention allows that human glutaming layclase (QC, BC-2.3.2.5) is capable of catalyzing the cyclisation of Gln and Glu to pyroglutamate (GDGU), making the enzyme a target for drug development. C grattin lay lay as its N-terminal residue, making it a substrate for C Grattin lay lay as its N-terminal residue, making it a substrate for C C. The invention relates to the identification, screening and use of effectors of QC for the preparation of a medicament for: (a) the creatment of diseases that can be medicament for: (a) the creatment of diseases that can be ynedulation of QC activity in vivo; and/or (b) the modulation of physiological processes based on the critic of glutaming peptides caused by modulation of QC activity in The QC action of pollutarion of physiological processes based on the critic of the seidues in a QC substrate such as gastrin 17. They can be used to treat Alzheimes' a disease, Down Syndrome, Huntington's disease, kennedy's disease, ulcer disease, Down Syndrome, Huntington's can be used to treat Alzheimes' a disease, Down Syndrome, with or without Holicobacter pylori infections, pathogenic psychotic conditions, cancer, malian metastasis, melanoma, psoriasis, rheumatory host responses, atherosclerosis, impaired humoral and cell-mediated immune responses, allekocyte adhesion and migration processes in the endochelium; impaired in the condition of a concerning and a concerning and concerning the concerning in the concerning of the concerning 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          food intake, aleep-wakefulness, impaired homeostatic regulation of energy metabolism, impaired autonomic function, impaired hormonal balance and impaired regulation of body fluids. The effectors of QC are also useful for: regulating and/or controlling male fertility; stimulating gastrointestinal tract cell proliferation, preferably proliferation of gastric aucosal cells, epithelial cells, acute acid secretion and for differentiating acid-producing parietal cells and histamine-secreting enterochromaffin-like cells (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of gastrin 17, a peptide that stimulates the stomach mucosa to produce and secrete HCl and the pancreas to secrete digestive enzymes. Gastrin 17 also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and
                                                                                                                                                                                                                                                               treating diseases and/or the action of pGlu-

The invention relates to the use of a glutaminyl cyclase effector (E1)

for modulating conversion of glutamic acid/glutamine residue to

pyroglutamic acid residue at the N-terminus of a glutaminyl cyclase (QC)

cubstrate. The glutaminyl cyclase effector is useful for treating a

cubstrate. The glutaminyl cyclase effector is useful for treating a

condition mediated by modulation of QC enzyme activity e.g. Familial

Extrish Dementia (FDD) and Familial Danish Dementia (FDD), ulcer disease

and duodenal cancer with or with out Helicobacter pylori infections,

colorectal cancer with or with out Helicobacter pylori infections,

colorectal cancer with or with out Helicobacter pylori infections,

colorectal cancer, Zolliger-Ellison syndrome, gastric cancer, Alzheimer's

infertility, neoplasia, inflammatory host responses, cancer, malign

metastasis, psoriasis, rhemarcid arthritis, atherosclerosis, impaired

migration processes in the endothellum, impaired food intake, sleep

wakefulness, impaired homeostatic regulation of energy metabolism,

maired autonomic function, impaired hormonal balance and impaired

regulation of body fluids, for the preparation of contraceptive

medicaments for males. The amino acid sequence of an N-terminal glutamine

processes in 17.
                                                                    zollinger-ellison syndrome; gastrointestinal disease; neoplasm; colorectal tumor; gastrointestinal tumor; Helicobacter pylori infection; antibacterial; infection; Gastrin 17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pharmaceutical; enzyme inhibition; neurological disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ZXEXEXEX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a pharmaceutical composition (I) comprising a gastrin compound (CI) having an extended activity upon administration to c a subject in comparison with native gastrin. (I) or CI is useful for treating a subject having diabetes, which involves administering CI or a modified gastrin capable of covalently reacting with a serum protein, where the frequency of administering the gastrin compound is less than crequency of administering the gastrin compound is less than circquency of administering the gastrin compound is less than circquency of administering the gastrin capable of involves measuring a physiological indicator of isle neogenesis, circquency of administering to the gastrin comprises a sequence of native gastrin capable of binding to the gastrin comprises a sequence of native gastrin capable of comparing to the gastrin serum level compared with the serum level of a peptide having an amino acid sequence of a native gastrin, which involves controlletion than native gastrin peptides, and has a longer half-life in circulation in a subject. This sequence corresponds to the variant capable to differs from sequence denoted as SEQ ID NO: 4 as given in the Sequence corresponds to the variant capable of bisting of the specification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pharmaceutical composition useful for treating diabetes, comprises a gastrin compound having an extended activity upon administration to subject in comparison with native gastrin.

The invention relates to imidazole derivatives and their salts, stereolsomers and polymorphs. The invention also relates to a composition comprising an imidazole optionally in combination with a carrier and/or excipient. The imidazole derivatives are useful in the manufacture of a medicament for the treatment of neurological diseases especially a medicament for the treatment of neurological diseases especially chorea, psychotic disorders, shizophrenia, impaired food intake, sleep disorders, impaired homeostatic regulation of energy metabolism, typertension, fever, anorexia nervosa, anxiety disorders, depression, epilopsy, drug dependence, alcoholism and neurodegenerative diseases including cognitive disorders and dementia. The imidazole derivatives are alcoholism and neurodegenerative diseases including cognitive disorders and dementia. The imidazole derivatives are also useful for stimulating the proliferation of myeloid progenitor cells or to suppress male fertility. This sequence represents a glutaminyl cyclase inhibitor peptide used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The present sequence represents glygastrin, a processing intermediate of gastrin derived through post-translational modification of the gastrin comparison of the gastrin of the gastrin of the gastrin of gastrin-axpressing colon cancer cells. The method comprises reducing gastrin expression of the cells by transfecting the cells to induce attisence polynucleotides inhibiting gastrin expression in the cells. A composition has also been developed for treating colon cancer, which comprises an expression construct comprising a promoter functional in comprises an expression construct comprising a promoter functional in comprises to and under the control of the promoter. The composition is used for treating colorectal cancer, especially in humans. Antibodies against gastrin are non-specific and cross-react with cholecystokinin. Also, antibodies are not available against all precursor forms of gastrin, and may often be antigenic themselves. The present method provides an alternative that can be used for the treatment and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                              Inhibition of growth of colon cancer cells - by transfection of anti:sense gastrin gene sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The present sequence represents gastrin, a processing intermediate of gastrin derived through post-translational modification of the gastrin comparison of the gastrin comparison of gastrin-axpressing colon cancer cells. The method comprises reducing gastrin expression of the cells by transfecting the cells to induce antisense polynucleotides inhibiting gastrin expression in the cells. A composition has also been developed for treating colon cancer, which comprises an expression construct comprising a promoter functional in cukaryotic cells and a polynucleotide encoding a gastrin gene positioned antisense to and under the control of the promoter. The composition is used for treating colorectal cancer, especially in humans. Antibodies against gastrin are non-specific and cross-react with cholecystokinin. Also, antibodies are not available against all precursor forms of gastrin, and may often be antigenic themselves. The present method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; gastrin; inhibition; colon cancer; colorectal cancer; treatment; prophylaxis.

The invention relates to a conjugate comprising a ligand, a linker and a cytotoxic agent. Also provided is a method of delivering a cytotoxic agent in a cell-specific manner, that involves administering the conjugate to a collection of cells comprising a receptor to which the ligand of the conjugate binds; where the cytotoxic agent is administered to the cells is a cell-specific manner. A composition comprising the conjugate and a carrier and the methods are useful in delivering drugs especific cell populations, such as cancer cells, and in treating cancer through the release of the cytotoxic agent. The present sequence comprises of

                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to methods for the treatment of colon cancer. The method involves inhibiting gastrin expression in colon cancer cells using antisense construct. The present sequence is a human progastrin derived peptide. Gastrin is a peptide hormone that plays a role in the initiation of colon tumours

                                                                               The invention relates to a novel method for harvesting a (poly) peptide produced by a recombinant host cell. The novel method involves selecting a call comprising a first nucleic acid encoding a leader peptide and a second nucleic acid fragment encoding the desired (poly) peptide. The first and second fragments are within the same open reading frame of the first nucleic acid and the leader peptide is functionally equivalent to an N-terminal leader peptide found with the pre-peptide of a lantibiotic. The host calls and nucleic acids are useful for producing, harvesting and post-translational modification of polypeptides. The polypeptides may be immunogenic composition. This sequence represents a polypeptide relating to the novel method of the invention.
producing pharmaceuticals, comprises selecting a recombinant nucleic acid

The invention relates to a pharmaceutical composition (I) comprising a comparison with native gastrin. (I) or (I is useful for a subject in comparison with native gastrin. (I) or (I is useful for creating a subject having diabetes, which involves administering C1 or a modified gastrin capable of covalently reacting with a serum protein, where the frequency of administering the gastrin compound is less than comparison of a native gastrin. The method further involves measuring a physiological indicator of isle neogenesis.

C involves measuring a physiological indicator of isle neogenesis, measuring fastrin comprises a sequence of native gastrin capable of binding to the gastrin/CCK receptor and an amino terminal cysteine or binding to the gastrin/CCK receptor and an amino terminal cysteine or cystene. (I) or (I is useful for maintaining for an extended period of time an increased gastrin serum level compared with the serum level of time an increased gastrin serum level compared with the serum level of circulation in a subject. This sequence of a native gastrin, which involves circulation than native gastrin peptides, and has a longer half-life in circulation than native gastrin peptides, and has a longer half-life in circulation in a subject. This sequence corresponds to amino acids 2-34 coff the wild type gastrin-34 peptide used in the invention. (Note: this sequence differs from sequence denoted as SEQ ID NO: 1 given on page 4 of the disclosure of the specification).

stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promise use helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA benchypes, and (B) an adjuvant peptide sequence from the invasin protein of Yershina. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component. The present sequence is an example of a spacer in the immune stimulator component to the immune stimulator to form a vaccine for treating peptic ulcer disease or gastrin-stimulated tumours. (Updated on 25-MAR-2003 to correct PN field.) Synthetic immunogenic peptides are provided in which a universal immune 8888888888888888888888888

ğ Inhibition of growth of colon cancer cells - by transfection ant1:sense gastrin gene sequences.

Disclosure, Page 51; 62pp; English

The present sequence represents an amidated gastrin, a processing intermediate of gastrin derived through post-translational modification of the gastrin gene (see AAT97434). A method has been developed of inhibiting the growth of gastrin-expressing colon cancer cells. The method comprises reducing gastrin expression of the cells by transfecting the cells to induce antisense polynucleotides inhibiting gastrin expression in the cells. A composition has also been developed for treating colon cancer, which composition has also been developed for treating colon cancer, which composition cells and a polynucleotide encoding a gastrin gene positioned antisense to and under the control of the promoter. The composition is used for treating colorectal cancer,

The present invention describes a modified therapeutic peptide (I)

comprising a therapeutically active amino acid region (III) and a
reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
a less therapeutically active amino acid region (IV), which covalently
conds with amino/hydroxyl/thiol groups on blood components to form a
condition acid therapeutic peptide components to form a
condition for modifying therapeutic peptides e.g. hormones, growth
cators and neurotransmitters, to protect them from peptidase activity in
convo for the treatment of various disorders. Endogenous therapeutic
conviction of suitable as drug candidates as they require frequent
confirming and attaching therapeutic peptidase in the body.
Condition of peptidases to increase length of activity (half
concess the action of peptidases to increase length of activity (half

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity.
especially in humans. Antibodies against gastrin are non-specific and cross-react with cholecystokinin. Also, antibodies are not available against all precursor forms of gastrin, and may often be antigenic themselves. The present method provides an alternative that can be used for the treatment and prophylaxis of colon-cancer cell growth
                                                                                                                                                                                     Gape

Patent No. 6548066

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Michaeli, Dov
APPLICANT: Gaplin, Martyn E.
APPLICANT: Watson, Susan A.
APPLICANT: Watson, Immunogenic Compositions
ITLLE OF INVENTION: Immunogenic Compositions
ITLLE OF INVENTION: Lo the CK-B/Gastrin Receptor and
ITLLE OF INVENTION: the Treatment of Tumors
NUMBER OF SEQUENCES: 3
CORRESPONDENCE ADDRESS:
ADDRESSEE: Dimitrios T. Drivas, White & Case LLP
STREET: New York
CITT: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      COUNTRY: U.S.A.

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT PILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 51037

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 6, Application US/08478546B
Sequence 6, Application US/08478546B
Patent No. 6303123
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Scibienski, Robert
TITLE OF INVENTION: Methods for the Treatment of Hormone-Dependent
TITLE OF INVENTION: Tumors with Immunogens against Gonadotropin Releasing Hormone
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:
ADDRESSEE Dimitrios T. Drivas, Esq.
STREET: 1155 Avenue of the Americas
CITY: New York
STATE: NY
COUNTRY: USA
ZIP: 10036-2787
                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 31687, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REPRENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 67517

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 31687

LENGTH: 112
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Sequence 2604 Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                             Sequence 46904, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

PILE REPERENCE: File Reference: 7326-094

CURRENT PILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 46904

LENGTH: 112
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Patent No. 6551795

GENERAL INFORMATION:

Patent No. 6551795

GENERAL INFORMATION:

TITLE OF INVENTION:

TITLE OF INVENTION:

ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION:

ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION:

ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: U8/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR PILING DATE: 1998-02-18

PRIOR PILING DATE: 1998-07-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 30868

LENGTH 574
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-09-252-991A-26078

Sequence 26079, Application US/09252991A

Sequence 26079, Application US/09252991A

Patent No. 6551795

GRNERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVERTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVERTION: AERUGINGAR FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVERTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVERTION: ABRUGINGAR FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT PAPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1999-02-18

PRIOR PILING DATE: 1999-02-18

Patent No. 5688506
GENERAL INFORMATION:
APPLICANT: Grimes, Stephen
APPLICANT: Scibienski, Robert
ITILE OF INVENTION: Immunogens Against Gonadotropin
TITLE OF INVENTION: Releasing Hormone
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CUMPTRY: USA

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: Ploppy disk
COMPUTER: Ploppy disk
COMPUTER: PLOPS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: PCT/US94/13205
FILING DATE: 12-NOV-1993
CLASSIFICATION:
                    FILING DATE: 07-JUN-1995
CLASSIFICATION 1424
PRIOR APPLICATION 1424
PRIOR APPLICATION DATA: 1995
CLASSIFICATION NUMBER: US 08/188,223
FLING DATE: 27-JAN-1994
CLASSIFICATION: 424
ATTORNEY/AGENT INPORMATION:
NAME: DTIVAS ESG., Dimitrios T.
REFERENCE/POCKET NUMBER: 32,218
REFERENCE/POCKET NUMBER: 31,218
REFERENCE/POCKET NUMBER: 31,218
REFERENCE/POCKET NUMBER: 1102865-300
TELEPHONE: 212-819-8286
TELEPHONE: 212-819-8286
TELEPHONE: 212-84-8113
INFORMATION FOR SEQ ID NO: 4: SEQUENCE CHARACTERISTICS:
LENGTH: 6 amino acids
TYPE: amino acids
TYPE: amino acids
TYPE: mino acids
TYPE: mino acids
TYPE: mino acids
TYPE: mino acids
TYPE: peptide
PRAGGENT TYPE: C-terminal

COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PREENTIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/968,466
FILING DATE: 27-JAN-1994
CLASSIFICATION:
ATTORNEY/AGENT INFORMATION:
ATTORNEY/AGENT INFORMATION:
REGISTRATION NUMBER: 32,218
REGISTRATION NUMBER: 32,218
REGISTRATION NUMBER: 1102865-300
TELECOMMUNICATION INFORMATION:
TELECOMMUNICATION ON 4:
SEQUENCE CHARACTERISTICS:
LENGTH: 6 amino acids
TWOOR AMINO ACIDS
APPLICANT: Scibienski, Robert
TITLE OF INVENTION: Immunogens Against Gonadotropin
TITLE OF INVENTION: Releasing Hormone
TITLE OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:
ADDRESSER: Dimitrios T. Drivas, Esq.
STREET: 1155 Avenue of the Americas
CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ZIP: 10036-2787

Sequence 9, Application US/09413564C

Patent No. 6716428

GENERAL INFORMATION:

APPLICANT: The Ohio State University Research Foundation

APPLICANT: Stevens, Vernon

TITLE OF INVENTION: Antigenic modification of polypeptides

FILE REFERENCE: URF 2-056 AVI

CURRENT RAPLICATION NUMBER: 09/413,564C

CURRENT FILING DATE: 2002-08-27

PRIOR APPLICATION NUMBER: 09/413,564

PRIOR PLING DATE: 1999-10-06

NUMBER OF SEQ ID NOS: 43

SOFTWARE: Patentin version 3.0

FEMALE OF TAXABLE APPLICATION OF SEQ ID NOS: 43

SEQ ID NO 9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 33 Application US/09413564C

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PETCHTIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/151,219
FILING DATE: 12-NOV-1993
CLASSIFICATION: 514
ATTOMEY/AGENT INFORMATION:
NAME: DTIAVAS, DIMÍTICAS
REFERENCE/POCKET NUMBER: 32,218
REFERENCE/POCKET NUMBER: 32,218
TELEPHONE: (212) 819-8286
TELEPHONE: (212) 354-8113
INPORMATION FOR SEQ ID NO: 1:
SEQUENCE CHARACTERISTICS:
LENGTH: 16 amino acids
TYPE: amino acid
TYPE: amino acid
                              NAME: Drivas, Dimitrios T.
REGISTRATION NUMBER: 32,218
REPERENCE/DOCKET NUMBER: 1102865-028
TELECHUNINICATION:
TELEPHONE: (212) 819-8286
TELEPHONE: (212) 849-813
INPORMATION POR SEQ ID NO: 4:
SEQUENCE CHARACTERISTICS:
LENGTH: 15 amino acids

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 75, Application US/08488351A

Patent No. 584346

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSER: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
STATE: N.
                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                 Gapa
                                                                                                                                                                                                                                                                                                                                                 ö

Sequence 74. Application US/08488351A

Sequence No. 584346

GENERAL INFORMATION:

APPLICANT: Ladd, Anna

APPLICANT: Zamb, Timochy

TITLE OF INVENTION: Immunogenic LHRH peptide constructs

TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines

NUMBER OF SEGUENCES: 114

CORRESPONDENCE ADDRESS:

ADDRESSER: Maria C.H. Lin
                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 74, Application US/08446692

Sequence 10, Application US/09079372
Patent No. 6165990
GENERAL INFORMATION:
APPLICANT: Singh, Pomila
APPLICANT: Wood, T.
TITLE OF INVENTION: INHIBITION OF ENDOGENOUS GASTRIN
TITLE OF INVENTION: EXPRESSION FOR TREATMENT OF COLORECTAL CANCER
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 50; DB 2; Length 18;

Sequence 17, Application US/09079372

Sequence 17, Application US/09079372

GENERAL INFORMATION:

APPLICANT: Singh, Pomila

APPLICANT: Wood, T.

ITILE OF INVENTION: INHIBITION OF ENDOGENOUS CASTRIN

TITLE OF INVENTION: EXPRESSION FOR TREATMENT OF COLORECTAL CANCER

NUMBER OF SEQUENCES: 17

CORRESPONDENCE ADDRESS:

ADDRESSEE: Arnold, White & Durkee

STREET: P.O. Box 4433

CITY: Houston

STREET: Texas

COUNTRY: United States of America

ITILE OF STREET: POSSION:

COMPUTER: READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

Sequence 15, Application US/09079372

Patent No. 616590

GENERAL INFORMATION:

APPLICANT: Singh, Pomila

APPLICANT: Wood, T.

TITLE OF INVENTION: INHIBITION OF ENDOGENOUS GASTRIN

TITLE OF INVENTION: EXPRESSION FOR TREATMENT OF COLORECTAL CANCER

NUMBER OF INVENTION: EXPRESSION FOR TREATMENT OF COLORECTAL CANCER

NUMBER OF INVENTION: MARRESS:

ADDRESSER: ATACOLA, White & Durkee

Sequence 7, Application US/09079372

Sequence 7, Application US/09079372

Patent No. 6165990

GENERAL INFORMATION:
APPLICANT: Singh, Pomila
APPLICANT: Singh, Pomila
APPLICANT: Wood, T.
TITLE OF INVENTION: INHIBITION OF ENDOGENOUS GASTRIN
TITLE OF INVENTION: EXPRESSION FOR TREATMENT OF COLORECTAL CANCER
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
ADDRESSEE: Arnold, White & Durkee
STREET: P.O. Box 4433
CITY: Houston
STATE: Texas
COUNTRY: United States of America
ZIP: 77210

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 95, Application US/08488351A

Sequence 95, Application US/08488351A

Patent No. 5843446

GENERAL INFORMATION:

APPLICANT: Ladd, Anna

APPLICANT: Ladd, Anna

APPLICANT: Mang, Chang YI

APPLICANT: Zamb, Timothy

ITILE OF INVENTION: Immunogenic LHRH peptide constructs

TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines

VORRESPONDENCES: 114

CORRESPONDENCES: 114

CORRESPONDENCES: Maria C.H. Lin

Sequence 76, Application US/08446692

Fatent No. 575951

GENERAL INFORMATION:

APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy

TITLE OF INVENTION: Immunogenic LHRH peptide constructs

TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines

NUMBER OF SEQUENCES: 114

CORRESPONDENCE ADDRESS:

ADDRESSEE: Maria C.H. Lin

STREET: 345 Park Avenue

CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                      RESULT 39

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3, Application US/0848721A
) Patent No. 559366
) GENERAL INFORMATION:
APPLICANT: BELINKA Jr, BENJAMIN A.
APPLICANT: COUGHLIN, DANIEL J.
APPLICANT: MODD, RICHARD
ITILE OF INVENTION: MICHARD
ITILE OF INVENTION: CONSTRUCTS
NUMBER OF SEQUENCES: 56
CORRESPONDENCE ADDRESS:
ADDRESSEE: MEUSTADT, P.C.

Patent No. 5773578

GENERAL INFORMATION:
APPLICANT: Hercend, Thierry
APPLICANT: Triebel, Frederic
TITLE OF INVENTION: New Proteins Produced By Human
TITLE OF INVENTION: Unmphocytes, DNA Sequences Encoding These Proteins And
TITLE OF INVENTION: Their Pharmaceutical And Biological Uses
TITLE OF INVENTION: Their Pharmaceutical And Biological Uses
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS: ADDRESS: ADDRESSER: BROWDY AND NEIMARK, P.L.L.C.
STREET: 419 Seventh Street, N.W., Suite 400
CITY: Washington
STATE: D.C.

US-09-270-767-42702

Sequence 42702, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REPRESENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT PILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SEQ ID NO 42702

LENGTH: 447
